Common Exhaust Type for Main and Pilot

Exhaust air from pilot valve will flow to main valve exhaust port. Exhaust air from main valve will not flow to pilot valve side due to a check valve.

Purpose

- Not to exhaust mist from PE (Pilot Exhaust) port to protect the surrounding environment
- To lower the exhaust noise from PE port when switching valve.
- To prevent silencer mounted to PE port from getting plugged in dusty environments.

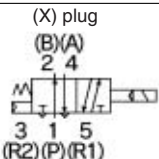

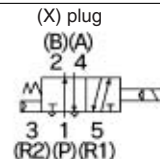

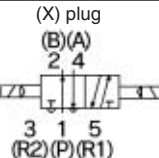

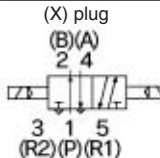

Caution

Common exhaust valves are effective for use with common exhaust manifolds, however an exhaust cleaner (Series AMC) should be installed when used in this manner. Make sure the exhaust port operates properly after installing the exhaust cleaner.

Used as a 3 Port Valve

Plugging one of the cylinder ports (A or B) enables use as a normally closed (N.C.) or normally open (N.O.) 3 port valve.

It is convenient when 3 port valve is needed on a manifold, etc., but it can't be used in special applications such as using as a non-leakage valve. Use it with the exhaust port leaving open.

Plug	B port (CYL. 1 port)	A port (CYL. 2 port)	
Type of actuation	N.C.	N.O.	
Number of solenoids	Single	 (X) plug (B)(A) 2 4 3 1 5 (R2)(P)(R1)	 (X) plug (B)(A) 2 4 3 1 5 (R2)(P)(R1)
	Double	 (X) plug (B)(A) 2 4 3 1 5 (R2)(P)(R1)	 (X) plug (B)(A) 2 4 3 1 5 (R2)(P)(R1)

Interchangeability with V1000 and V3000

V1000 and V3000 are respectively interchangeable with VF1000 and VF3000. Mounts are the same however, care must be taken because the main valve switching differs from the VF3000 to the V3000.

1. When cylinder port is body ported.

Port position of CYL1 and CYL2 are opposites. Make sure of the port symbol and pipe so that back actuation does not occur.

2. When cylinder port is base mounted.

When the VF3000 is installed on sub-plate or base mounted manifold (B1, B2) in the same position with V3000, air flow will be reversed. Follow either of these installation procedures.

- Install the VF3000 on the sub-plate or manifold base in the opposite direction.
- Install the VF3000 in the same position as the V3000 but reverse the piping of the CYL port.

Wiring

Grommet with surge voltage suppressor at DC voltage has +/- direction. Connect to the power source as follows. DIN connection and Terminal connection are free from +/- direction. Connect no. 1 and 2 terminals to the power source.

Attaching and Detaching Connectors

- To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve so that the lever's pawl is pushed into the groove and locks.
- To detach a connector, remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

Crimping the Lead Wire and Socket

Peel 3.2 to 3.7 mm of the tip of lead wire, enter the core wires neatly into a socket and crimp it with a special crimp tool. Be careful so that the cover of lead wire does not enter into the crimping part.

Attaching and Detaching Lead Wires with Sockets

1. Attaching

Insert the sockets into the square holes of the connector (with + and - indication) and, continue to push the sockets all the way in until the lock by hooking into the seats in the connector. (When they are pushed in, their hooks open and they are locked automatically.) Then confirm that they are locked by pulling lightly on the lead wires.

2. Detaching

To detach a socket from a connector, pull out the lead wire while pressing the socket's hook with a stick having a thin tip (approx. 1 mm). If the socket will be used again, first spread the hook outward.

Plug Connector Lead Wire Length

Standard length is 300 mm, but the following lengths are also available.

Note 1) Supply (P port) is common.

Note 2) Common exhaust type for main and pilot valve is possible only in the valves of common exhaust.

Option

Description	Part no.	Applicable manifold model
Individual EXH spacer assembly <small>Note)</small>	DXT155-17-1A	VV5F3-30/40
Blanking plate assembly	DXT031-38-1A	VV5F3-30/40/50

Note) Used to exhaust air individually from certain valves mounted on common exhaust manifolds "Type 30" and "Type 40".

How to Order Manifold

Instruct by specifying the valves and blanking plate assembly to be mounted on the manifold along with the manifold base model no.

(Example) VV5F3-40-052-02.....1 pc. (Manifold base)

*VF3140-1G.....2 pcs. (Valve)

*VF3240-1G.....2 pcs. (Valve)

*DXT031-38-1A.....1 pc. (Blanking plate assembly)

↳*The asterisk denotes the symbol for assembly. Prefix it to the part nos. of the solenoid valve, etc.

5 Port Pilot Operated Solenoid Valve Rubber Seal

Series VF5000

Compact and lightweight:
32 mm width
Compact yet provides a large flow capacity:
Sonic conductance
C: 12 dm³/(s·bar)
{4/2 → 5/3(A/B → EA/EB)}
Low power consumption: 1.8 W (DC)

Specifications

Fluid		Air
Operating pressure range	2 position single/3 position	0.15 to 0.9 MPa
	2 position double	0.1 to 0.9 MPa
Ambient and fluid temperature		-10 to 50°C (No freezing. Refer to page 3-13-4.)
Response time ⁽¹⁾	2 position single/double	30 ms or less (at the pressure of 0.5 MPa)
	3 position	50 ms or less (at the pressure of 0.5 MPa)
Max. operating frequency	2 position single/double	5 Hz
	3 position	3 Hz
Lubrication		Not required
Manual override	Non-locking push type, Locking type B*, Locking type C*	
Mounting orientation	Unrestricted	
Shock/Vibration resistance ⁽²⁾	300/50 m/s ²	
Enclosure	Dustproof	

Note 1) Based on dynamic performance test, JIS B 8375-1981. (Coil temperature: 20°C, at rated voltage, without surge suppressor)

Note 2) Impact resistance: No malfunction occurred when it is tested with a drop tester in the axial direction and at the right angles to the main valve and armature in both energized and de-energized states every once for each condition. (Values at the initial period)

Vibration resistance: No malfunction occurred in a one-sweep test between 45 and 2000 Hz. Test was performed at both energized and de-energized states in the axial direction and at the right angles to the main valve and armature. (Values at the initial period)

Note 1) P (SUP) port is all common.

Note 2) Model number for valve unit is that for application manifold.

Option

Description	Part no.	Applicable manifold model
Individual EXH spacer assembly ^{Note)}	DXT156-20-1A	VV5F5-20/21
	DXT156-20-3A	VV5F5-40
Blanking plate assembly	DXT156-19-1A	VV5F5-20/21
	DXT156-19-2A	VV5F5-40

Note) Spacer is used when it is necessary to exhaust from certain valves individually.

How to Order Manifold

Instruct by specifying the valves and blanking plate assembly to be mounted on the manifold along with the manifold base model no.

(Example) VV5F5-20-051..... 1 pc. (Manifold base)

*VF5120-1G-03.....2 pcs. (Valve)

*VF5220-1G-03.....2 pcs. (Valve)

*DXT156-19-1A.....1 pc. (Blanking plate assembly)

The asterisk denotes the symbol for assembly. Prefix it to the part nos. of the solenoid valve, etc.
